Sunlight Supply Lighting

Ever wanted to grow roses or other plants successfully indoors or in your basement? Want to supplement your greenhouse lighting? Now you can! Rosemania is proud to be a full-line distributor for Sunlight Supply. We carry a wide range of High Pressure Sodium and Metal Halide lighting.

Complete systems start as low as \$152.00.

See page 6 of this catalog for more examples or call us at our toll free number **888-600-9665** and let us help you design your new lighting system today.

Clearex Salt Leaching Solution

Clearex® is an isotonic drenching solution that unlocks the ionic bond between the nutrient and the soil, correcting the problem of nutrient salt toxicity and lockout, allowing plants to excel again. Before applying Clearex, foliar spray plants with pure water. Use Clearex in the early morning or evenings. Soil containers and gardens use 1 to 2 tablespoons of Clearex per gallon of water. Pour one to two quarts on soil around plants every twenty-one days. Water and fertilize as usual. This is a wonderful product for anyone who wants to control salt buildup in their soil. A must have for exhibitors and for those who grow plants in containers!

\$19.99 - quart
\$37.99 - gallon

Liquid Karma

Liquid Karma contains a full complement of metabolically active organic compounds not found in regular plant foods or supplements. These unique compounds are absorbed immediately and act as regulatory signals, activators or catalysts to produce synchronized and accelerated growth under all conditions. Liquid Karma functions as a growth engine because its high metabolic activity produces a large amount of energy which is immediately transformed to growth. It contains seven major groups of nutrients based on their specific effects on plant growth and development: **Fermented Compost Solution** - prepared by exhaustive bacterial and enzymatic fermentation of fish meal, composted seabird guano, spirulina, sea kelp, and soybean meal. **Amino Acids** - important plant nutrients because they serve as building blocks for structural proteins and enzymes. **Vitamins** - beneficial for plant growth. **Plant Extracts** - contain high levels of the plant hormones known as auxins and cytokinins. **Humic Acid** - known to stimulate the growth of roots, shoots and flowers, by maintaining the proper osmotic concentration in cells. **Seaweed Extract** - contains metabolically active carbohydrates, complex carbohydrates, minerals such as cobalt, strontium and iodine, and growth substances that are known to be beneficial for plant growth. **Carbohydrates** - provide the added burst of energy required to assimilate and metabolize all of the other wonderful ingredients present in Liquid Karma. Extensive research and field trials indicate that Liquid Karma™ produces beneficial results during every phase of plant growth. Usage is from 1 teaspoon to 1 tablespoon per gallon. Liquid Karma is not a fertilizer and should be used in addition to your regular fertilizing program.

\$25.00 - quart

4020 Trail Ridge Drive, Franklin, TN 37067

Compass

Compass is a "mesostemic" fungicide which acts by penetrating the plants' surface without significantly moving through the plants' vascular system. Dew is no longer your enemy as it actually aids in the redistribution by additional spreading and penetration. This tight bond to the plant yields an extremely weather-resistant fungicide. Excellent blackspot and powdery mildew control with 14 day spray intervals. Best when alternated with **Banner Maxx**. Usage is 1/4 to 1/2 teaspoons per gallon.

\$210.00 - 8 oz

Banner Maxx

Tired of spraying every week? Banner Maxx has become our best selling preventative fungicide and for good reason..... it is very effective with a 14 day spray interval. For best results, alternate with **Compass**. If you need a more economical alternative, spray your first rotation with Banner Maxx mixed with Manzate or Mancozeb. After 14 days, use Banner Maxx alone and continue to repeat this process throughout the growing season. Usage is 1/3 - 2/3 teaspoons per gallon.

\$67.95 - Pint

E-RASE

E-RASE is a new contact fungicide that can be applied to roses, grapes and vegetables after powdery mildew is present. It is derived from a naturally occurring agent called jojoba. If powdery mildew is slipping through your regular treatment then E-RASE is the perfect safe product to eradicate it. Usage is 4 - 5 teaspoons per gallon of spray solution. Spray infected plants only. Repeat after 4 days.

\$24.50 - pint

Mancozeb & Manzate

Mancozeb and Manzate contain the only chemical that will kill the blackspot spore. If you already have the fungus then Funginex, Daconil, Banner Maxx, Compass, Clearys, or any other preventative won't be very effective. Mix Mancozeb or Manzate at a rate of 1 tablespoon per gallon of spray material. Spray every three days for three or four spray intervals and your blackspot should be under control. At that time you can go back to your regular preventative program. Mancozeb comes as an any easy-to-dissolve liquid. Manzate is more practically priced as a powder for large gardens.

Mancozeb (pt) \$21.50

Manzate (6 lb) \$32.50

New Odd Size Measuring Spoons

We wanted to make sure we found the perfect measuring spoons made for all those "odd quantity" chemicals we sell. Manufactured of the toughest 18/10 stainless steel, these superb nesting spoons are oval in shape to reach into the smallest space. The gently curved handles curl under, so that each spoon sits securely on the counter without tipping over. The five spoons are attached to a special clip designed to come apart easily. Sizes are as follows: Pinch (1/16 teaspoon!); 1/8 teaspoon, 2/3 teaspoon (perfect for Banner Maxx); 1.5 teaspoons; and 2 teaspoons!

Regularly \$14.95 but only \$10.00 when combined with any other Rosemania product. (roses and gift certificates excluded)

Conserve SC

Recent studies on thrip control have revealed the effectiveness of Conserve, a spinosad insecticide. Spinosad is derived from a soil dwelling bacteria. Studies at Ohio State University found that Conserve was significantly better than Orthene at controlling thrips while retaining high numbers of beneficial insects. Conserve also works great for control of bud worms, bag worms, fall webworms, gypsy moth, and spruce budworms. It also is labeled for gall midge. Usage is 2 ml/gallon (approximately 1/3 teaspoon per gallon)

\$99.95 - quart

Floramite SC

Now this fantastic miticide/ovicide is available in a soluble concentrate. *Floramite SC* is a selective miticide that provides outstanding control of mite pests on ornamental plants. Floramite produces quick knockdown through contact activity and long residual control of more than 21 days. It is effective on a variety of species of mites and all life stages of *Tetranychidus* spider mites. (Yes, this means it kills the eggs!) And because of its novel mode of action and selective nature, Floramite is easy on predacious mites and beneficial insects. Usage is 1/4 to 1/2 teaspoon per gallon of spray. Finally, a great alternative to Avid and with the added benefit of an ovicide in one package. Works even better when combined with *Stirrup M*. This is the best miticide we have ever used.... PERIOD!

<i>Isotox (pint)</i>	\$18.99

Orthene 97%

We are happy to offer *Orthene 97%* labeled for ornamentals. *Orthene 97%* comes in a easily dissolvable granule instead of a fine powder, giving all the benefits of *Orthene 75%*, without the offensive odor. In our opinion, this also makes for a safer product as dust seems to be greatly reduced. *Orthene* has a proven track record as a reliable pesticide for aphids, thrips and other common insects. With the new higher concentration of active ingredient, it only requires 3/4 tsp. per gallon of spray solution.

\$24.99 (.773 lb)

Mavrik

Don't let those pesky cucumber beetles eat holes in your beautiful roses. Usage is 1/4 teaspoon per gallon of spray.

\$145.00 - Quart

Merit

Bayer - Purcell brings us the latest secret weapon for aphids and Japanese Beetles. We originally used this product to control aphids that had become resistant to *Orthene*. Wow, does it really work! The big bonus was how effective it was on Japanese Beetles. The recommended application rate for roses is 1/8 teaspoon per gallon of spray solution applied every other week.

\$54.99 - 2 oz bottle

Nitril Disposable Gloves

When it comes to hand protection from pesticides, the best glove money can buy is constructed of Nitril. Here is a quote from the Virginia Tech Pesticide Program. "*You should never handle a pesticide without using a pair of unlined chemical resistant gloves....Look for gloves made of nitrile or neoprene....*". Our Nitril disposable gloves make it especially easy to handle measuring-spoons during mixing where the chemicals are at their most concentrated form. A box of 100 gloves will last most users 2 years.

\$19.99
Box of 100

Indicate 5

Indicate 5 is the choice of expert growers across North America for getting the most out of their spray programs. Years of testing have proven that pesticides and are more effective and last longer when mixed and sprayed in a 4.5 to 5.5 pH solution. No pH strips are needed as Indicate 5 will turn the water a light pink color when the correct amount has been added. Usage varies, but ranges between 1 teaspoon and 1 tablespoon per gallon of spray solution. Indicate 5 also contains a great surfactant (spreader/sticker) to evenly distribute the spray across the leaves and stems. Available in quart and gallon sizes.

\$16.95 (quart)
\$37.95 (gallon)

Dual Cartridge Respirator

This dual cartridge respirator is the perfect tool for being certain that you are not breathing harmful chemicals. We highly recommend every rose grower wear a pesticide respirator when spraying any type of pesticide. We are very pleased with the comfort of this mask along with the heavy duty elastic used in the construction of the straps. Remember, if you can smell the chemical, you are breathing it!

\$34.50

Gauntlet Gloves

Have you always wanted a pair of gauntlet gloves but didn't want to pay the price? These are the exact gloves sold elsewhere for more than \$50! The Gauntlet Glove was designed for hand and forearm protection against thorny chores such as roses and shrubs. A heavy but flexible goatskin glove is attached to an elbow length roughout suede gauntlet. A web strap at the wrist cinches to prevent debris from entering inside. A great gift for yourself or someone special! Be sure to specify size.

\$40.00

Customers Note:

Please DO NOT spray fungicides, insecticides, or miticides without proper protective gear. This includes a respirator, goggles and chemical resistant gloves at a minimum. You should also take proper precaution to cover your arms and legs with either long pants and long sleeve shirt, or with a chemical resistant suit such as Tyvek.

<i>Chrysal RVB Pro 1 (quart)</i>	\$32.50

NEW! - Chrysal Pro 2

For years we have been recommending the use of Chrysal Pro 1 (RVB) with the Chrysal "Clear" Sachets or Liquid. The reason is this: RVB (Pro 1) is a hydration solution. It allows the cut flowers to "drink" maximum water keeping stems and petals turgid (stiff). This promotes "holding" and eliminates the "bent neck syndrome". The Chrysal "Clear" product contains sugars specially designed for feeding roses and other cut flowers. (Yes, your roses can actually continue to grow in the vase or in the cooler.) Now we are now proud to introduce *Chrysal Professional 2* the perfect combination of RVB and *Chrysal Clear* for exhibitors or anyone who wants long-lasting flowers. Keeps the water clean, clear and odorless. Usage is 2 teaspoons per quart. A gallon concentrate will make 96 gallons of finished product.

\$65.00 gallon

Kelway HB-2

Professional pH Tester

Check your soil anywhere in only 3 minutes! The Kelway professional direct pH soil tester is used by thousands of nurseries across the world.

When inserted into moist soil, the HB-2 registers the degree of acidity on the upper scale. When the button is depressed, the lower scale shows the degree of moisture (% saturation). Comes with a handy carrying case with belt loop and complete instructions including a guide for changing soil pH. Extremely accurate to (+/- .2). Very durable. No batteries required.

\$115.00

Kelway pHD

A new, less expensive model made for the small gardener but with the same accuracy as the HB-2.

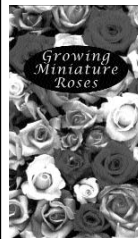

\$63.00

Showing Good Roses

We believe Bob Martin's new book to be the most comprehensive resource on showing roses that is currently available in any format.

P4 Water Crystals

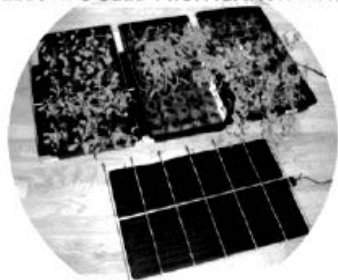

Are you tired of watering your potted plants daily, or worse, finding them with weak bent necks from running out of water? Broadleaf P4 is a high performance, long lasting, hydrophilic (water and nutrient storing) polymer which has been specifically developed for agricultural and horticultural applications. Depending on the amount of P4 and type of plants and soil, P4 can routinely save between 30% and 50% of normal watering amounts or watering intervals. We use 2 tablespoons in pots and 4 tablespoons for roses planted in a bed. This is a must have for anyone in hot and dry areas or for anyone growing roses in containers.

\$59.95

Dosmatic Fertilizer Injector

We are very excited to be offering the ULTIMATE in fertilizer injection technology. Ask any professional nurseryman what he uses to control his liquid feeding program and he will tell you, "The Dosmatic". This is the most accurate fertilizer injector available and it uses no electricity. You can select the concentration of fertilizer you want to use from the "lockable ratio adjuster". Simply mix your concentrate in the tank, set the ratio you want, turn on the water, and start fertilizing. The ratio will remain constant regardless of your water pressure or the flow rate. This is the last fertilizer injector you will ever buy. If you don't believe us, ask any nursery if they use a DOSMATIC! The answer will be, "YES"!

Garden-Hose Water Meter

Fits directly on to the lawn faucet or water hose with its own swivel adapter. The outlet of the meter is 3/4" Male Hose Thread so a hose or

water-wand can be screwed directly to it. Now you can accurately determine how much liquid fertilizer and water you are putting on your roses! This meter features an easy-to-read odometer type reading in single gallons, and an additional rotary dial with a sweep hand reading 1 gallon per revolution with graduations down to 2/100 of a gallon! There is also a spinning trickle indicator showing if there is any flow at all to detect leaks. Accurate to 1%. The perfect device for use with your *EZ Flow* or Brass Syphon Fertilizing systems. Save sewer charges by accurately deducting from your bill!

\$98.00

Liquid Fence

For years, people have been asking *Rosemania* for a product to control deer and rabbit damage. Many products claim to be effective, but we chose not to sell them for one reason..... they didn't work. We are very proud to finally offer a product that does work, guaranteed! While most products offered on the market work on taste (where the deer and rabbits have to actually bite the plant, which causes damage) LIQUID FENCE works on odor, which most animals find offensive. This odor turns the animal in the other direction before they even have a chance to chew on the plant. You will be able to smell Liquid Fence during application. Once dry, only the animals will be able to detect its smell. ***If for any reason you are not 100% satisfied, Liquid Fence Co. will refund the suggested retail price or replace this product.***

**Quart "Concentrate"
